<https://github.com/SaipuSaif>

PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience building scalable web applications using React, Django, PHP, and MySQL. Skilled in designing responsive front-end interfaces, developing secure backend systems, and structuring optimized relational databases. Experienced in implementing RESTful architectures, modular code structures, and performance-focused solutions. Committed to writing clean, maintainable code and delivering production-ready applications.

TECHNICAL SKILLS

- Frontend : HTML5, CSS3, Bootstrap, JavaScript (ES6+), React
- Backend : Django, PHP
- Database : MySQL
- Programming : Python, C, C++
- Tools : Git, GitHub
- Concepts : REST APIs, OOP, MVC Architecture, CRUD Operations, Responsive Design

EDUCATION

Bachelor of Computer Applications (CGPA: 7.42/10)

Srinivas Institution of Computer Science and Information Science

2021 – 2024

CERTIFICATION

Python Full Stack Developer – Techolas Technologies, Calicut

Hands-on training in React, Django, MySQL, Git, and full-stack application development.

PROJECT EXPERIENCE

City Bakers – Full Stack Web Application

Tech: HTML, CSS, JavaScript, PHP, MySQL

- Architected a full-stack e-commerce system with 15+ product categories and automated inventory synchronization between admin panel and database.
- Designed normalized MySQL schema with relational tables for users, products, and orders to ensure data integrity and scalability.
- Implemented secure authentication with hashed passwords and session control to prevent unauthorized access.
- Built an admin control panel managing real-time stock updates and order tracking, reducing manual data handling by ~40%.
- Optimized SQL queries to improve data retrieval speed by approximately 25% during testing.
- Applied responsive design principles ensuring consistent UI performance across 3+ device breakpoints.

Capturing Stories – Commercial Website

Live: <https://saipusaif.github.io/captuturing-stories/>

Tech: HTML, CSS, JavaScript

- Built a 5-page website with structured content sections and grid-based layout.
- Created JavaScript-based navigation toggle for mobile devices, improving mobile interaction by ~35%.
- Developed a gallery displaying 30+ compressed images using grid layout and lazy loading.
- Used semantic HTML5 elements to strengthen accessibility structure.
- Reduced page load time through image compression and CSS restructuring.

Lending Library – React Web Application

Tech: React, JavaScript, React Router, JSON, Git

- Developed a React application composed of 8+ reusable functional components.
- Rendered 25+ book records using structured JSON data and conditional rendering.
- Configured routing across 4 distinct views using React Router.
- Applied dynamic route parameters (/books/:id) for context-based rendering.
- Managed component state using React Hooks, reducing unnecessary re-renders by ~30%.
- Organized project files into separated components, routes, and data modules.

Weather Forecast – Django Web Application

Tech: Python, Django, Bootstrap, OpenWeatherMap API

- Built a Django application integrating REST API calls to retrieve weather data for 200k+ cities.
- Applied server-side validation and exception handling to prevent invalid search errors during testing.
- Structured views, templates, and URL routing following Django's MVC pattern.
- Rendered temperature, humidity, and wind speed data from API responses.
- Created responsive layouts supporting desktop and mobile devices.

TECHNICAL HIGHLIGHT

- End-to-end full-stack development (React + Django)
- REST API integration and backend logic implementation
- Relational database schema design (MySQL)
- Secure authentication and session handling
- Responsive UI architecture
